DETAILED ACTION

Drawings

✓ This application has been filed with informal drawings which are acceptable for examination purposes only. Figures are rough and contain copy machine marks.

Applicant is required to submit a formal correction of the noted defects.

Applicant is required to submit drawing corrections promptly. Drawing corrections may no longer be held in abeyance.

Specification

✓ The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3732

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14, 17, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Hammond et al. (U.S. Patent No. 3,463,144).

Hammond et al. discloses (Fig. 2) a tool (32) comprising a paddle member comprising a hole (40) and a slot (38) formed therein. The tool further comprises a pair of fingers (44, 46) formed at a forward end of said paddle and a U-shaped channel (48) formed between said fingers. Said fingers are curved.

The recitations regarding the intended use of the tool have been considered but are given little patentable weight in distinguishing the structure of the instant invention from equivalent structure already disclosed by Hammond et al.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3732

Claims 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hammond (U.S. Patent No. 3,463,144).

Hammond does not disclose fingers comprising a second section extending transversely to an end of a first section. Hammond however teaches angling a second section (44 or 46) relative to a first section (42). It would have been obvious to one of ordinary skill in the art to have provided the second section of Hammond to have extended transversely to a first section in order to have accommodated a particular patient or surgical procedure (col. 3, lines 20-28).

Hammond does not disclose ribs. However, to have provided ribs in order to have enhanced the tissue holding ability of the Hammond paddle would have been obvious to one of ordinary skill in the art.

Allowable Subject Matter

Claims 1-13 are allowable over the prior art of record.

Claims 15 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The additional references cited disclose various features which are similar to those disclosed by Applicant.
